Education

University of Cyprus

Bachelor of Computer Science | GPA: 8.08/10

Expected Graduation: Jun 2027

Nicosia, Cyprus

- Strong background in **OS**, **Data Structures**, **Algorithms**, **Databases** and **core math**.

Work Experience

pozare (website)

Sep 2026 – Present

Software Engineer Intern

Nicosia, Cyprus

- Co-building the **full-stack platform**, from user-facing workflows to backend services.
- Building **Go backend services** while contributing to the **React product experience** and marketing website.

Talos

Jun 2026 – Sep 2026

Software Engineer Intern

Nicosia, Cyprus

- Built a reusable **Go-based gateway certification framework** automating **connection**, **symbol**, **credential**, and **order execution** tests for trading infrastructure.
- Implemented **7 certifications** covering known gateway failure scenarios, **catching real production issues** and improving gateway reliability.

Wargaming

Jul 2025 – Jan 2026

Junior Engineer Intern

Nicosia, Cyprus

- Improved production **DDoS alerting reliability** by migrating a Python service to **Kubernetes**, integrating context-rich alerts with Jira and Teams workflows.
- Built **FastAPI + MySQL REST** services analyzing **10k+ Jira incidents** and managing **hundreds of automation rules**, reducing operational effort by **50%+**.

CYENS Centre of Excellence

Jun 2025 – Jul 2025

Software Engineer Intern

Nicosia, Cyprus

- Built **LangChain workflows** for branching AI story generation and LLM summarization.

Open Source Contributions

Meta (facebook/pyrefly)

Jan 2026

- Fixed incorrect **SelfType attribute lookup** in the **pyrefly type checker** for classes inheriting from **Any** by implementing spec-aligned fallback logic and adding regression tests (merged PR #2271).

Pydantic

Jan 2026

- Improved **ImportString** error handling in **Pydantic** to prevent masked dependency failures; added regression tests and ensured full CI pass (merged PR #12740).

Projects

Quant Labs (source)

Python

- Implemented a price-time priority **limit order book** and **matching engine** in **Python**, simulating exchange microstructure and order execution.

One-Stop Ride-Hail (OSRH) (source)

SQL | Flask

- Implemented a ride-hailing backend with core business logic in **SQL Server** (stored procedures, triggers, functions); optimized indexing to achieve **sub-second queries** on datasets exceeding **10k rows**.
- Developed a lightweight **Flask API** and Python data pipeline to generate large synthetic datasets for testing.

Technical Skills

Languages: Python, Java, Go, SQL, C++

Technologies: FastAPI, Spring Boot, SQLAlchemy, LangChain

Databases: PostgreSQL, MySQL, SQL Server

Tools: Linux, Git, Claude Code, Docker, Kubernetes, Grafana, Jira

Interests: Algorithms, numerical computing, backend systems
